IV. CHICAGO ENERGY BENCHMARKING BACKGROUND AND COMPLIANCE

■ DATA PORTAL: The City of Chicago publishes energy information about every building required to benchmark and report on its Data Portal once per year. Users can view the data, download the information, and compare similar properties. There is a one-year grace period; the first year a building reports its information, the data is not shared.

In 2017, the City is authorized to share information about every building that has reported – approximately 2,700 properties (with a very small number of exceptions for newly-constructed buildings.) The energy benchmarking information on Data Portal can be found at: https://data.cityofchicago.org/Environment-Sustainable-Development/Chicago-Energy-Benchmarking/xq83-jr8c

The City and its partners have also published an interactive map of the building data. To use the map and view building results, including the buildings in your neighborhood, please visit: http://cityenergyproject.github.io/chicago/
